

LED FACE MASK

CONCEPT SUMMARY

This script commands immediate scientific trust by deploying a raw, clinical authority reframe that bypasses standard marketing hype. It calls out a massive category pain point, the flood of ineffective online devices, by pinpointing the exact failure mechanism: incorrect spectrum physics (wrong wavelengths and power). The marketing logic seamlessly transitions from a clinical endorsement of LUMÉ's seven wavelengths to a clear mathematical justification. By presenting a stark ROI Calculation (\$109 one-time cost vs \$40–\$80 per single clinic session), it positions the purchase as an immediate money-saving investment that pays for itself in three uses, defusing price objections before the final risk-free close.

Video Script Table

Time & Segment	Audio Script (Voiceover Copy)	Visuals & Text Overlays (TOS)
0:00 - 0:04 (The Hook)	"I'm a dermatologist, and I want to be honest with you about at-home LED masks."	• Visual: Dermatologist on camera. Clean white or soft clinical background. Professional but not sterile, think clean office, not hospital. She looks directly into the lens. No intro, no greeting, straight into it. • Text on Screen: "Dr Ashley - Dermatologist" lower-third title card fades in at 0:01 • Editing Notes: No music at the open. Silence reinforces authority. The title card must appear within the first second; it is doing critical

		credibility work before she says anything else. Confident, measured delivery. No rushing.
0:04 - 0:12 (The Problem)	“Most of them, and I mean the majority of what you'll find online, don't actually work. Not because LED therapy doesn't work. Because they're using the wrong wavelengths at the wrong power.”	• Visual: Same framing. She holds the gaze. Slight pause after the hook lands before continuing, let it breathe. • Text on Screen: “Most LED Masks Don't Work.” Bold text appears mid-line • Editing Notes: The pause before “Not because LED therapy doesn't work” is critical; it prevents the viewer from dismissing the category entirely and keeps them in the ad. Do not rush past it in editing.
0:12 - 0:22 (The Mechanism)	“If the light isn't hitting the right depth in the skin, you're not getting a cellular response. Which means you're not getting collagen stimulation, you're not clearing acne bacteria, you're not doing anything. You're just sitting in coloured light.”	• Visual: She leans in slightly, engaged, not aggressive. Like a doctor explaining something important across a desk. Optional: quick B-roll insert of a cheap generic LED mask for 1 second, then cut back to her. • Text on Screen: “Wrong Wavelength = Zero Results” • Editing Notes: The “you're just sitting in coloured light” line is the emotional gut-punch of the ad. It should land clearly with no music swell or competing text. One clean graphic is enough. B-roll of cheap generic mask (if used) should look visibly inferior, flimsy, toy-like.
0:22 - 0:34 (The Solution)	“The device I recommend to my patients for at-home use is the LUMÉ LED Glow Mask because it uses seven clinically-inspired wavelengths. Red for collagen. Blue for acne. Green for pigmentation. Yellow for redness. It's covering everything the skin actually needs.”	• Visual: Creator holds the LUMÉ mask up close to her face or wears it as she cycles through each mode, and she clicks to the next colour on the mask. The light changes on her face in real time, red, blue, green, yellow... • Text on Screen: LUMÉ LED Glow Mask product name on screen / Then: Red · Blue · Green · Yellow · Cyan · White · Purple cycling as she names them • Editing Notes: Product reveal timing = she says “LUMÉ” and the product appears simultaneously. The wavelength list cycling on screen while she speaks gives the viewer two information channels at once, auditory and visual, which dramatically increases retention of the spec detail.

0:34 - 0:42 (The Results)	“Ten minutes a day, that's genuinely all it takes. I've seen patients improve skin texture, reduce breakouts, and visibly slow signs of ageing just from building this into their evening routine.”	• Visual: Back to her face. Direct, calm, authoritative. She speaks like she's wrapping up a consultation. • Text on Screen: “10 Min/Day. Consistent Use. Real Results.” • Editing Notes: Pacing slows slightly here; this is the results section, and it needs to feel considered, not rushed. The word “genuinely” carries the weight of the medical opinion. Do not cut over it.
0:42 - 0:52 (The ROI Calculation)	“It's a hundred and nine dollars. For context, a single in-clinic LED session typically costs \$40 to \$80. This pays for itself in three uses.”	• Visual: As she delivers the clinic cost comparison, cut to a 2-second B-roll insert of a real clinical setting, a woman lying back in a professional LED treatment bed. Then, a hard cut back to the creator comfortably holding the LUMÉ mask at home. • Text on Screen: \$109 One-Time vs \$40–\$80 Per Clinic Session comparison text on screen • Editing Notes: The cost-per-use math is the rational justification that removes the last objection. Display it as text simultaneously with the voiceover so the viewer processes it on two levels. Keep the delivery flat and factual. She is not selling, she is calculating.
0:52 - 1:02 (The Close)	“There's a thirty-day money-back guarantee, so there's no real risk in trying it. If you've been thinking about LED therapy and you want something that actually works at the right wavelengths, then click the link below and grab yours”	• Visual: Back to her on camera. Final direct eye contact. Slight nod. She finishes like a recommendation, not a pitch. • Text on Screen: 30-Day Money-Back Guarantee · Free Shipping · Shop LUMÉ → • Editing Notes: Delivery on the close should feel like a doctor ending an appointment definitively, calmly, done. No excitement, no urgency language. The confidence IS the CTA. Hold on her face for one full second after she finishes. Then cut to a clean end card.

META AD COPY BLOCKS

Primary Text:

Before you write off LED masks completely... watch this.

According to this dermatologist, many people judge the category based on low-quality devices, not the LED itself.

LUMÉ was created to make at-home use simple and easy to maintain.

Headline:	Recommended by dermatologists
Description:	30 Day Risk-Free
